PROFESSIONAL SUMMARY

Detail-oriented QA Automation Engineer with strong analytical skills and solid understanding of software development life cycles. Developed proficiency in test automation and programming through hands-on experience with various testing tools and technologies. Focused on continuous learning and effective collaboration in dynamic environments.

SKILLS

- Java-Selenium-Maven-TestNG
- Cypress-JavaScript
- Appium
- Burp-Suite
- Trello
- Effective communication
- Functional testing
- Test planning
- Playwright-JavaScript
- API testing
- Postman/Swagger
- Jira
- High adaptability
- Regression testing
- Requirements analysis

WORK HISTORY

QA Automation Engineer, 05/2026 - Current

Code Trade.io – Ahemdabad

- Conducted manual and automated testing of Odoo CRM / ERP solutions, validating functional modules for Sales, Purchase, Inventory, and Accounting workflows to ensure system reliability.
- Perform manual and automated testing of Odoo CRM / ERP-based business solutions, validating functional modules across Sales, Purchase, Inventory, and Accounting workflows.
- Validate complex, multi-step business workflows spanning standard and custom Odoo modules to ensure data integrity and consistency across the platform.
- Executed Functional, Regression, Smoke, and UAT testing across multiple client projects, designed test scenarios, and tracked defects to closure, enhancing overall product quality.
- Collaborated with developers on root-cause analysis, validated fixes, and ensured stable releases for Odoo-based products, contributing to smoother deployment processes.

QA Automation Engineer, 01/2025 – 04/2026

Perfect QA LLP – Ahmedabad

- Results-driven QA Automation Engineer hands-on experience in software testing automation across web and mobile application in diverse domains.
- Designed, built, and executed test automation frameworks from scratch using Selenium for cross-browser and cross-platform testing, incorporating Playwright and Cypress with JavaScript, and conducted mobile testing with Appium.
- Expert in API testing using Postman and Swagger, ensuring accuracy and reliability of RESTful services and backend integrations.
- Demonstrated strong understanding of SDLC, STLC, and Defect Life Cycle by designing detailed test scenarios, test cases, and execution reports, while effectively tracking and reporting defects using Jira, Trello, and Linear.
- Applied various testing methodologies including functional, regression, smoke, sanity, system, exploratory, ad hoc, performance, and UAT testing.
- Experienced in embedding automated testing within CI/CD pipelines to improve QA efficiency in Agile/Scrum and Waterfall environments.
- Highly collaborative and detail-oriented, with experience engaging cross-functional teams—developers, product owners, and business analysts—to align testing efforts with business goals.

EDUCATION

Bachelor's degree: Computer Science and Engineering

SAL Institute of Engineering and Research - Ahmedabad, Gujrat

GPA: CGPA - 8.2/10

HOBBIES

Reading Books, Drawing

Credebt – Intelligent Finance Platform (ETR Trading)

Role: Manual Tester + Automation | Domain: Finance

- Designed and executed test cases for ETR creation, validation, trading, and settlement workflows.
- Performed Smoke, Sanity, Regression, System, and UAT testing across staging, pre-prod, and production.
- Verified production deployments and performed post-release validation.
- Logged and tracked defects in JIRA; collaborated with developers for RCA and fix validation.
- Built an automation framework to verify UI against positive and negative flows.
- Set up a pipeline that automatically checks the whole website at time of deployment, resulting in a stable product.

Arcis AI – AI-Based Video Management System

Role: QA Engineer | Domain: AI, Computer Vision, Surveillance

- Performed large-scale performance testing of 100,000 camera streams using Docker + Azure Cloud.
- Tested AI analytics (object detection, motion tracking, anomaly alerts) and multi-location video sync.
- Conducted Smoke, Regression, Sanity, System, and Ad-hoc testing on Web, Android, iOS, and SDKs.
- Validated storage pipelines, playback quality, network performance, and role-based access security.
- Coordinated debugging, reviewed team test cases, and ensured accurate release validation.

Be-Genuin – AI Video Community Platform

Role: QA Automation Tester | Domain: Social Media, Video Sharing | Tech: Selenium, Appium, Java

- Developed and maintained automated test scripts for Web and Mobile.
- Enhanced automation framework for scalable regression coverage.
- Executed automation suites via CI pipelines; analyzed failures and generated reports.
- Collaborated with developers to integrate automation into the deployment workflow.

Jambo Card – Digital Identity & Networking Platform

Role: QA Tester | Platform: Android, iOS, Mobile Web

- Tested card creation, sharing, document galleries, postings, services, and networking modules.
- Performed Functional, Regression, Sanity, Exploratory, and cross-browser testing.
- Ensured responsive UI and cross-device compatibility.

Gottcha – GPS-Based Outdoor Hide-and-Seek Game

Role: QA Tester | Domain: Gaming

- Tested GPS-based gameplay, map logic, movement tracking, and outdoor scenario behaviour.
- Performed Functional, Regression, and Exploratory testing.
- Identified gameplay/UI issues and coordinated fixes with developers.

Shopify Connector – ERP-Retail & POS Integration

Role: QA Automation Engineer | Domain: Retail, Point of Sale

- Tested end-to-end order management flow from Shopify storefront to POS systems for deployment in large retail outlets and malls.
- Validated integrations with peripheral devices including printers and payment terminals within a unified Odoo ecosystem.
- Ensured data consistency across order creation, fulfillment, and hardware sync workflows.

WooCommerce – Centralized Store Management via Odoo

Role: QA Engineer | Domain: E-commerce, ERP

- Tested a fully integrated e-commerce solution where a client's WooCommerce storefront was connected to Odoo ERP for unified control of inventory, orders, and customer data.
- Validated real-time sync accuracy between the storefront and backend, covering product updates, order status changes, and stock adjustments.

Five Star – Logistics & Shipment Cost Management

Role: QA Engineer | Domain: Logistics, Finance

- Tested a comprehensive shipment management platform handling multi-stage cost validation including packaging, handling, and delivery charges for a US-based logistics company.
- Performed end-to-end financial accuracy testing across complex order flows involving multiple vendors, cost centers, and delivery stages.
